

WHAT WE DO

N³ places its extensive expertise at the disposal of partners and clients in the public and private sector worldwide. Our goal is to identify, develop and implement joint solutions in the area of sustainable development – for the benefit of individual organizations, regions and countries. Whilst our focus lies on the achievement of SDGs 7 (affordable and clean energy), 9 (industry, innovation and infrastructure) and 11 (sustainable cities and communities), we can also make a significant contribution to finding solutions to the other goals.

For example:

- We analyse long-term trends, develop target-oriented strategies and assist in their practical implementation at all levels
- We identify sources of finance and submit corresponding applications
- We take charge of project management for international projects
- We work successfully for our clients at the interface between science, administration, enterprises and policymakers

MODEL PROJECTS

- Concept and development of an International Sustainable Chemistry Collaborative Centre (ISC₃) as an international think-and-do tank to bundle and foster sustainable chemistry at global level. Undertaken in close cooperation with the United Nations Environmental Programme on behalf of the German Environment Agency. See www.isc3.org
- Pilot project “Sustainable Waste Management” with ten small and medium-sized enterprises
- Organizers, speakers and facilitators at international conferences, e.g. ISWA World 2016 in Novi Sad, 26th Economic Forum 2016 in Krynica, 2nd European Congress of Local Governments 2016 in Krakow and 2nd Green and Sustainable Chemistry Conference 2017 in Berlin

Achieving the goals...

...together

**SUSTAINABLE DEVELOPMENT
CONSULTING**

SUSTAINABLE DEVELOPMENT

Today, sustainable development is crucial at all levels.

With its Agenda 2030 and the 17 Sustainable Development Goals, the United Nations have defined extensive and far-reaching targets.

These can only be achieved if they are tackled in all areas, i.e. in each and every enterprise, public institution, municipality and region. This calls for a great degree of cooperation and exchange at international level and beyond national borders.

WHO WE ARE

N³ is three senior consultants who together have over 120 years' experience in the following fields:

- Waste and resource management
- Energy and water supply
- Public services
- Corporate environmental management
- Chemical risk assessment and sustainable chemistry
- Innovation and technology transfer
- Policy consulting
- International project management

DR. HENNING FRIEGE

- Internationally renowned expertise in resource management and sustainable chemistry
- Extensive experience in management of corporate entities and administrative bodies
- Experience in leadership of successful international projects
- Excellent contacts to science, administration, business and politics

PETER WOLFMEYER

- Extensive experience as CEO of a regional innovation and technology transfer agency
- Leadership of a network of European environmental experts from over 20 countries
- Acquisition and management of many large-scale EU projects
- Consulting experience in several „younger“ EU Member States, e.g. Poland, Malta, Romania as well as in Switzerland, Israel, South Africa, Canada and Turkey

ROLF M. DOLLASE

- Extensive experience in the management of national and international research, consulting and auditing firms
- Expertise in energy, water and wastewater management, media and education
- Close contacts to administration, politics and corporate entities
